

Fireblocks

Brand Guidelines

Logo

Symbol

Primary Logo

The logo and wordmark work in harmony to create a cohesive and recognizable brand identity. The logo’s energetic directionality embodies our speed, energy, and passion, while the wordmark communicates our precision and technical expertise ensuring readability and explicit communication. When used together, the two elements compliment each other enhancing brand recall. The two elements should be used in balance—either as a unified lockup or separately in designated applications—to maintain consistency across touchpoints. Do not modify or recreate the logo.

Logo Construction

Our logo has been specifically designed to bring together our clean, modern san-serif wordmark with the energetic, detailing of the 50 light streaks in our symbol in to a cohesive lockup.

Safe Space

Our logo is detailed, has a strong directionality, and requires some unique consideration compared to less detailed logos. To maintain visual impact and legibility, it is essential to provide adequate space around it in layout, free from any text, imagery, or other design elements.

Symbol Sizing

Consistency and legibility are crucial factors to consider when determining the size of the logo within a design. The primary version of our symbol is legible in scenarios as compact as 48px, below that the Alternate Micro Logo should be used.

16px

24px

48px

64px

96px

128px

256px

Color Usage

Thoughtful color application when using the logo is essential for maintaining both consistency and legibility. The logo will most often appear in black or white however in instances where color is applied in color, make sure to maintain adequate contrast.

Cobranding

We work with many exciting brands. In cases where our logomark has to be presented equally with these brand we have special spacing guidelines that all this partnership to feel like an intentional lockup but avoids crowding or overshadowing of either symbol.

Extended Color Palette

Each of the brand's primary colors are chosen to reflect Fireblock’s commitment to trust, scalability, and structural integrity which in turn supports it’s mission of enabling secure, enterprise-grade digital asset infrastructure.

Genesis Grey
Represents clarity and structure. It creates breathing room for transparency and precision. Used in backgrounds and elevated surfaces, it serves as the neutral ground upon which systems are built and scaled.

Network Navy
Embodies strength, depth, and dependability reflecting the enterprise trust and technical rigor behind the product. It communicates authority and provides the foundation for visual interactions.

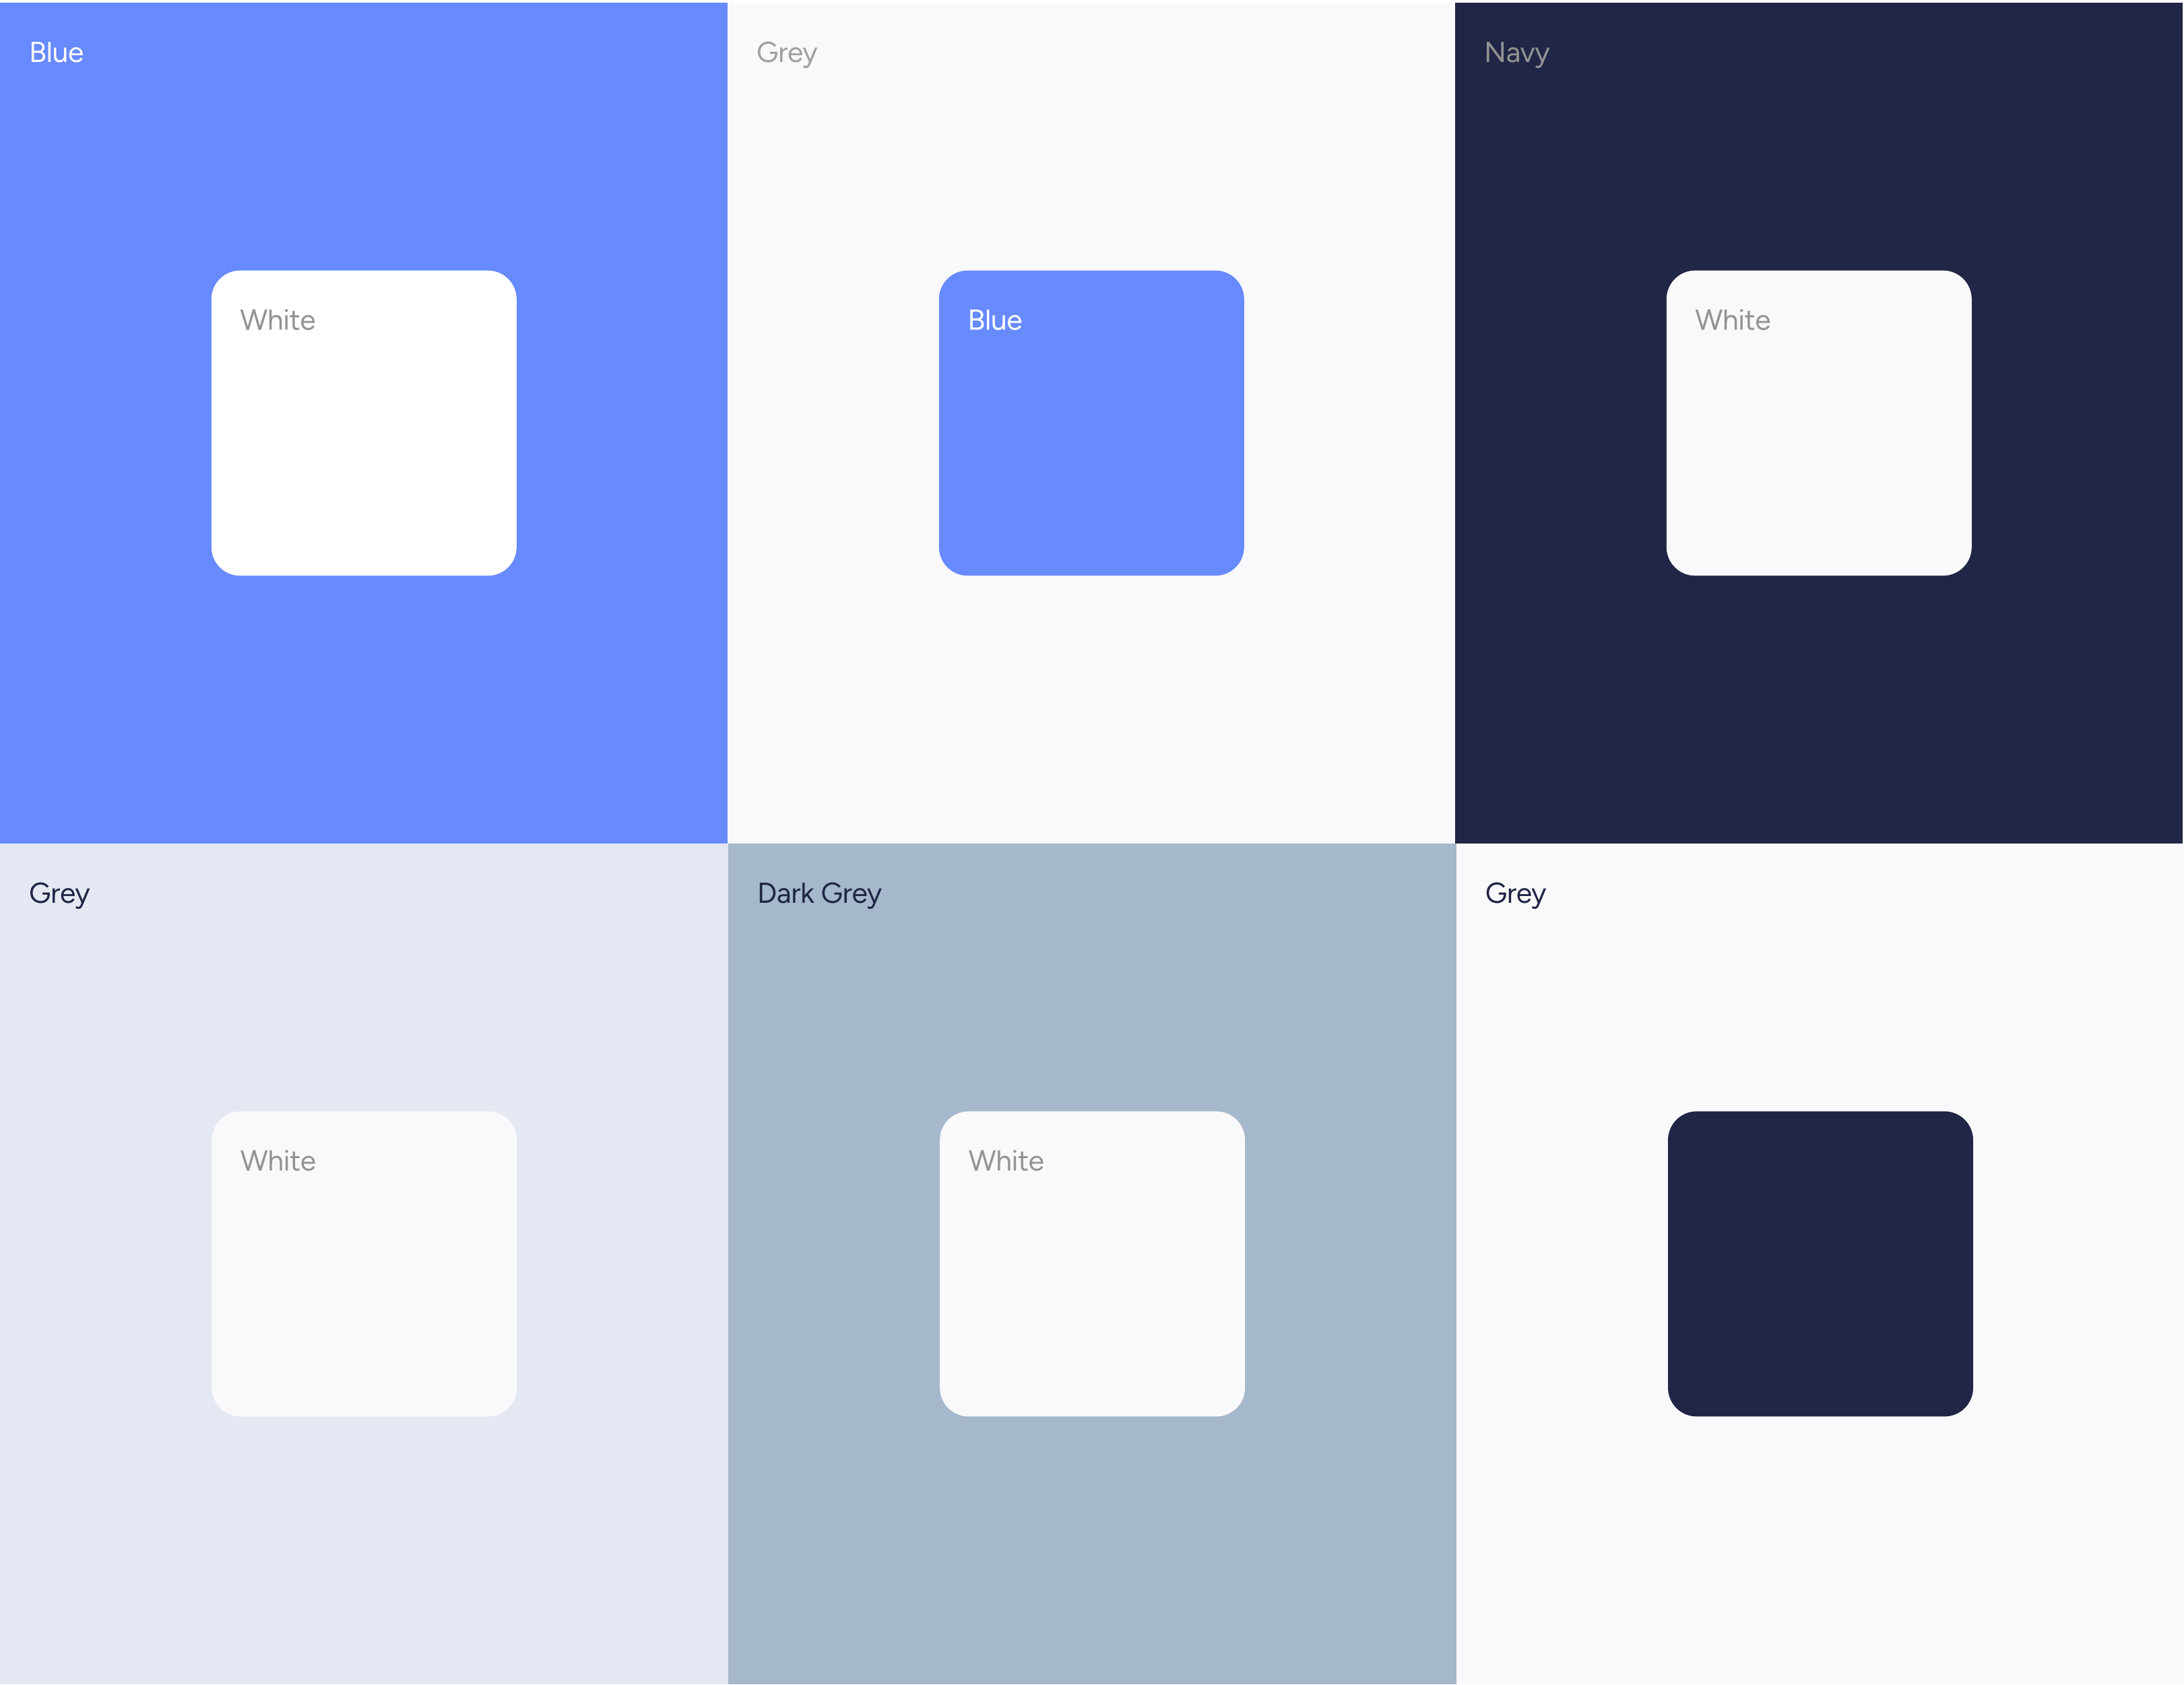

Bandwidth Blue
Energetic yet controlled it symbolizes adaptability and forward motion. As the accent in our palette, it conveys innovation and our dynamic capability along with the ability to flex and grow with our partners.

Gateway Gold
Symbolizes the entry point to stable value, bridging traditional finance and on-chain assets. Its warm, assured hue highlights stablecoin balances, call-out panels, and key data points reinforcing our role as the “gateway” into secure digital assets.

Color Pairing

By consistently pairing light vs. dark and neutral vs. accent, colors maintain visual clarity while bringing the viewers focus to the content that needs focus.

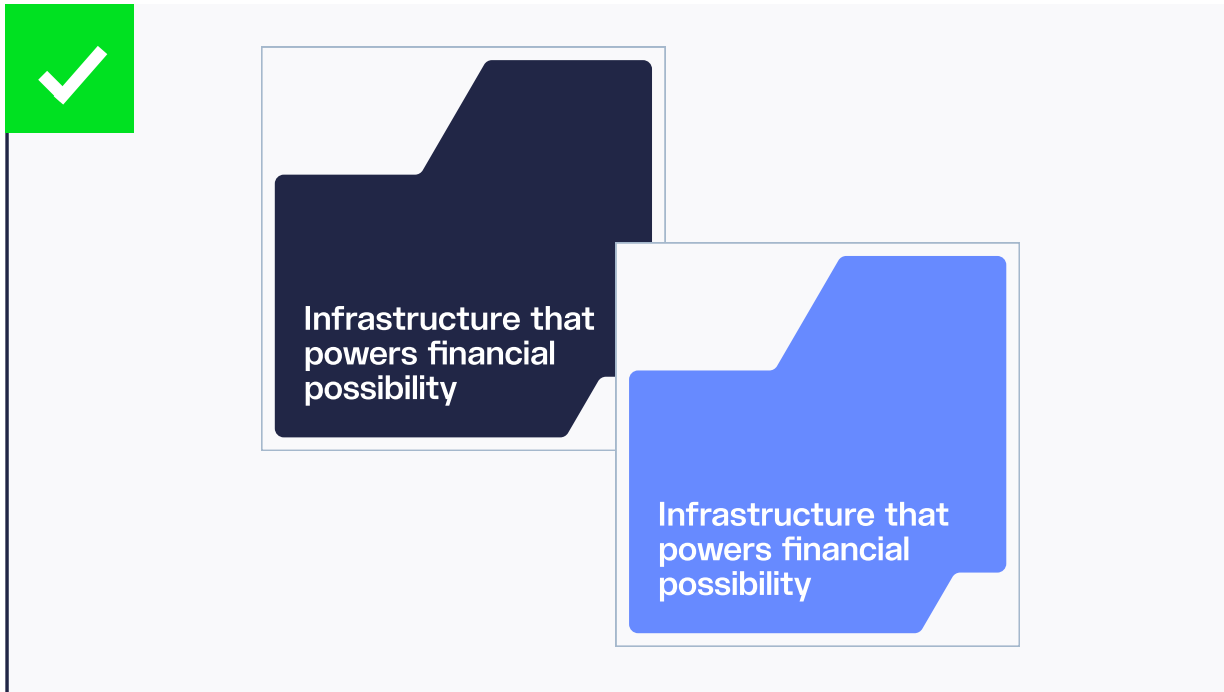

Text Pairing

Text pairing combinations are created by combining pairs of primary colors and secondary colors, these combinations allow us to portray the brand's cohesive identity and character in a versatile, yet legible typographic applications.

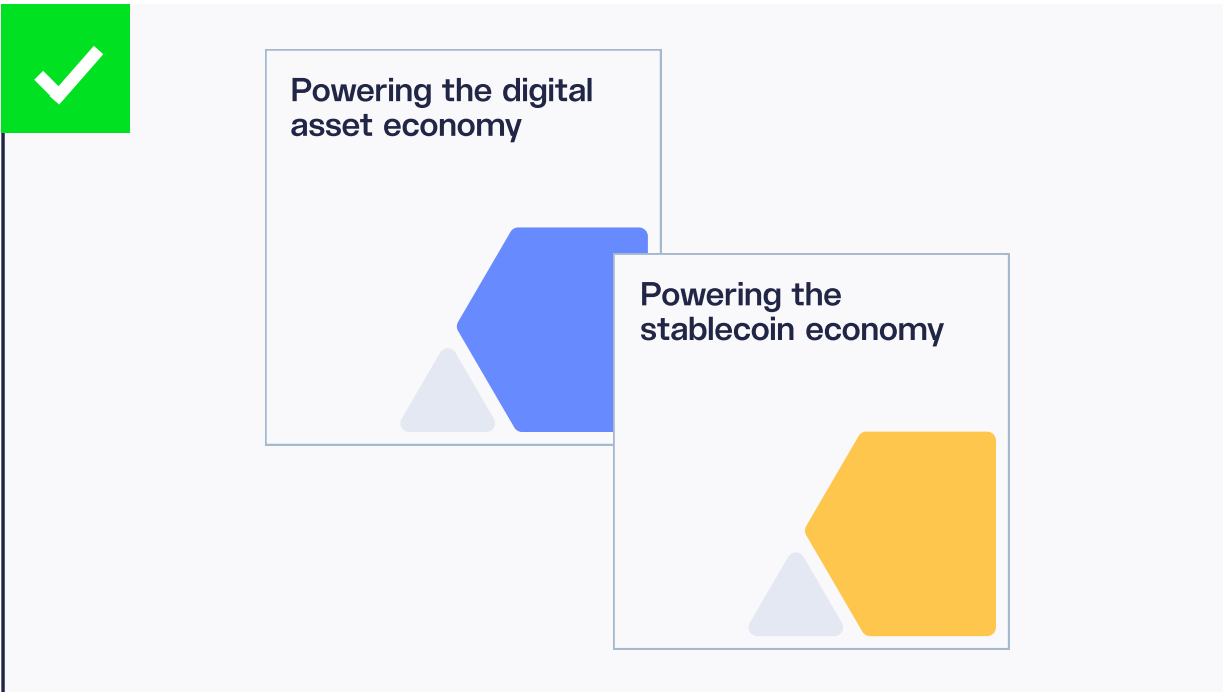

Color Usage & Misuse

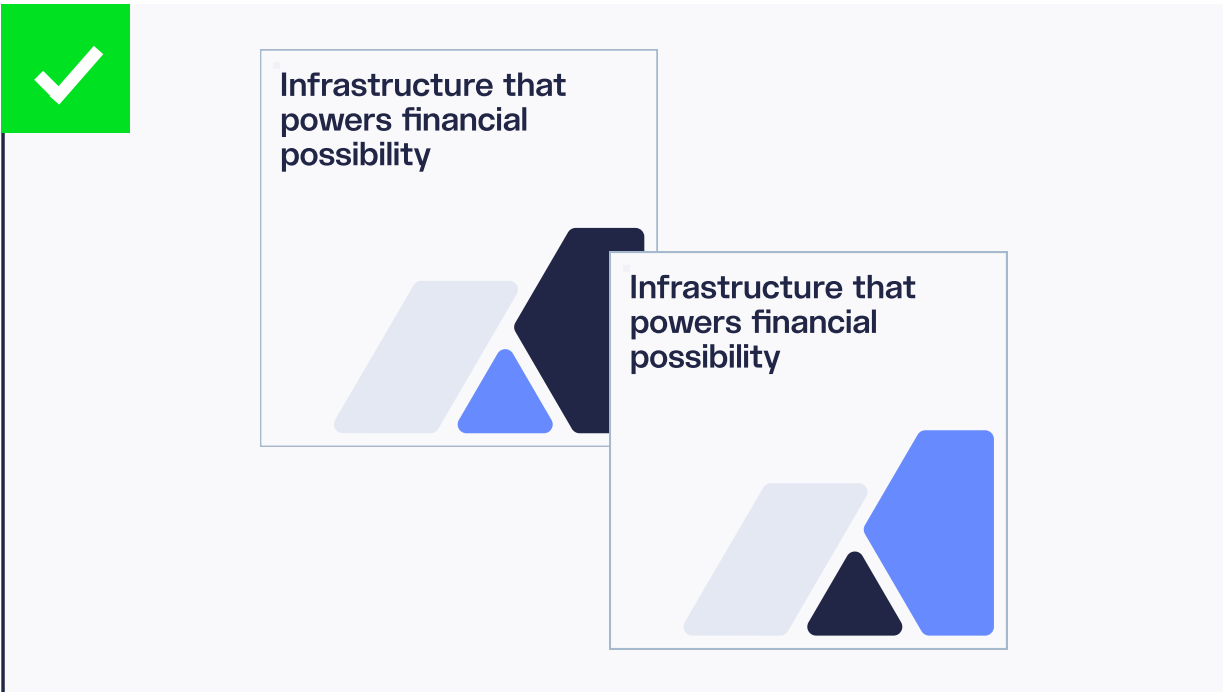

Lorem Ipsum

Use accessible colors when overlaying typography.

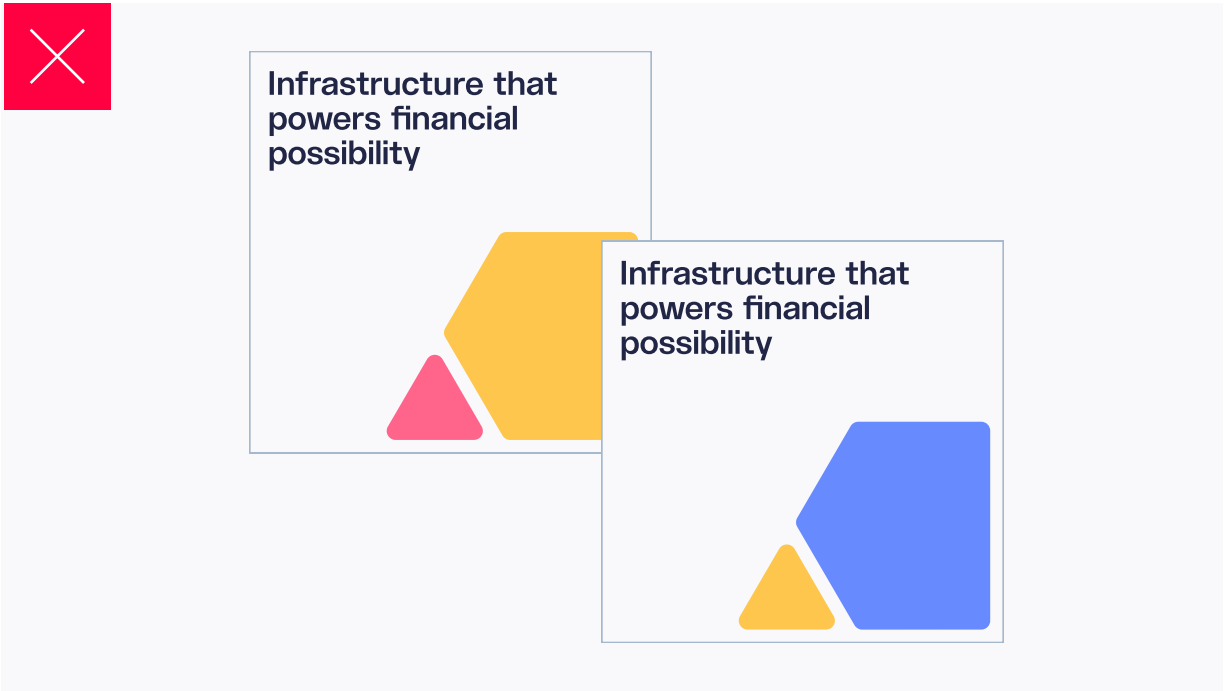

Use color with a clear purpose to differentiate between solutions.

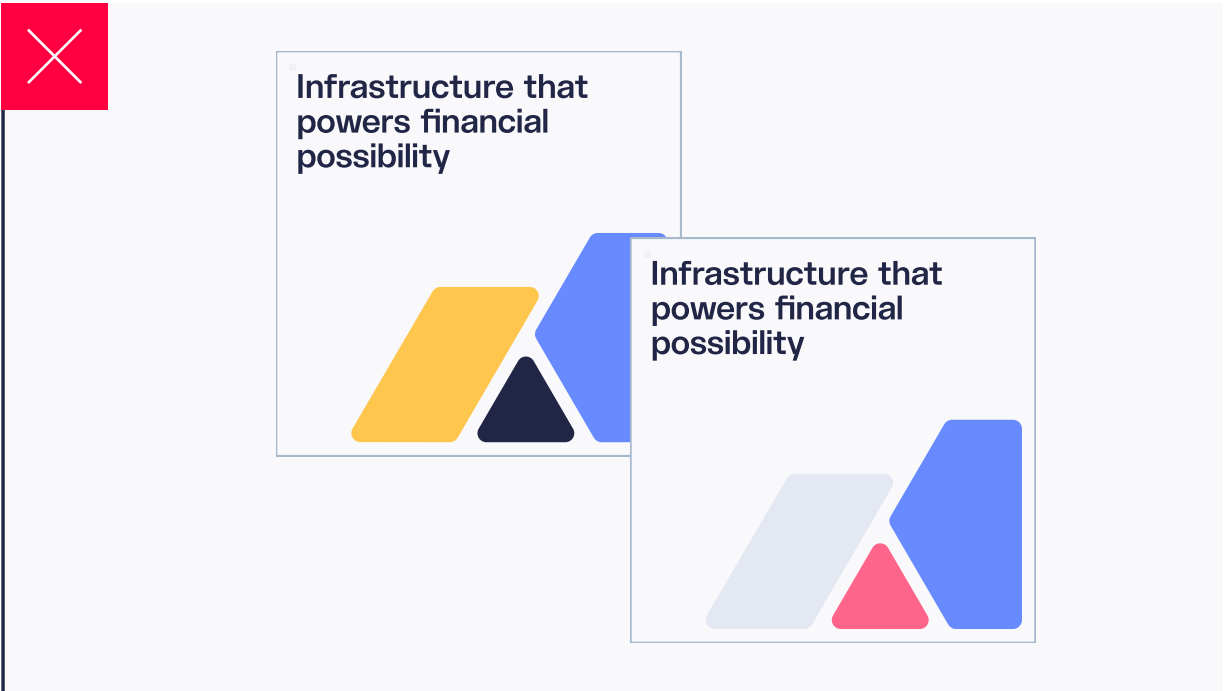

Use only one accent color at a time
(exceptions allowed as design decisions).

Do not use accent colors for background colors.

Do not use two accent color next to one another.

Do not use two accent colors together.

Color & Type Usage

Lorem Ipsum

Use Genesis Grey, White, or Bandwidth Blue text on Navy backgrounds.

Use Navy or Bandwidth Blue text on Genesis Grey or white backgrounds.

Use tones of grey to provide hierarchy.

Use yellow, pink or teal accents for highlighted words only.

Do not use accent colors as primary text colors.

Do not use multiple accent colors together.

Do not use low-contrast or inaccessible colors.

Do not use accent colored texts on accent colored shapes.

Accent Colors

Accent Colors

Token Gold
A warm, confident yellow that signals a new era in global payments—fast, fluid, and trusted. It represents value moving at scale with clarity and momentum.

Threshold Teal
A precise, modern teal rooted in creation and technical clarity. It reflects the developer mindset behind defining and structuring new digital assets.

Protocol Pink
A bold, energetic pink that captures the cultural pulse of Web3. It celebrates experimentation, community, and the emergence of new digital economies.

Token Gold
This warm, golden yellow reflects a new era in payments—where value moves globally with speed, clarity, and confidence. It suggests momentum and efficiency, signaling systems built to scale without friction. Bright and assured, it evokes the feeling of entering a more fluid, connected, and trusted age of exchange—a golden moment for how value flows.

Threshold Teal
This crisp, modern teal represents creation and digital precision—the developer’s mindset of building new systems with clarity and intent. Cool and deliberate, it reflects the technological rigor behind tokenization: defining, coding, and structuring new digital assets that power the future of finance.

Protocol Pink
This vibrant pink represents creativity, openness, and the cultural energy of Web3. It captures the sense of experimentation and community that defines crypto-native ecosystems. Bold yet approachable, it celebrates the new forms of ownership, identity, and collaboration emerging in decentralised networks.

Accent Color Use Cases

Token Gold
This warm, golden yellow evokes trust, optimism, and energy. qualities essential for payments, where clarity and confidence drive adoption. Its brightness draws attention without being aggressive.

Threshold Teal
This cool, shade suggests digital precision, transparency, and future-focused technology, perfect for representing the structured yet fluid nature of tokenized assets. It

Protocol Pink
This vibrant pink-red carries a modern, disruptive edge that reflects the innovation and cultural energy of Web3. It signals that this space is bold and people-driven.

Use Case 1: Accent Color

Accent colors are applied as complementary elements within the core brand palette. They should be used sparingly and subtly, such as within shapes, highlighted words, or other minor design details, ensuring they never distract the viewer. The overall look and feel must remain anchored in the primary navy and periwinkle palette.

Proportion Examples

Backgrounds

Text

Shapes

Use Case 2: Solution-Focused

accent colors take on a more prominent role as identifiers for sub-brands, such as Tokenization, Payments, and Crypto/Web3. Here, the accent color becomes the dominant visual element, serving as the primary marker of distinction for each sub-brand.

Typography

Headline Font - Ufficio Fireblocks

Ufficio Sans is a modern, humanist sans-serif typeface that combines clarity with character, making it an ideal choice for the Fireblocks brand.

Its balanced proportions and open letterforms offer excellent legibility across digital and print media, ensuring that brand messaging remains accessible and professional.

AaB

Font Weights

2 font weights have been chosen for simplicity of use, making one available for titles, one for subheadings.

Body Font - Figtree

Figtree is a clean, geometric sans-serif typeface that excels in body text applications due to its simplicity, warmth, and legibility.

As a secondary font paired with a more expressive primary typeface like Ufficio Sans, Figtree provides a subtle, supportive foundation for longer-form content.

AaB

Body Text

Body text is set in 'Figtree', configured with two weights and six different sizes.

Figtree Regular for regular text and **Figtree SemiBold** for emphasizing text with a higher weight.

Body Text S

Visual Language

Fireblocks Infrastructure

Infrastructure that powers
financial possibility

Build on Fireblocks

The unique shapes represent our partners and customers. Varying in shape and size, they represent the wide range of customer types and use cases that Fireblocks supports.

The grid allows our shapes to evolve and expand, showing the flexibility and scalability of our platform.

Connect on Fireblocks

The seamless connection and integration of shapes shows the interoperability and scalability of our platform.

More than just an infrastructure, we connect the entire digital asset ecosystem under one unified platform.

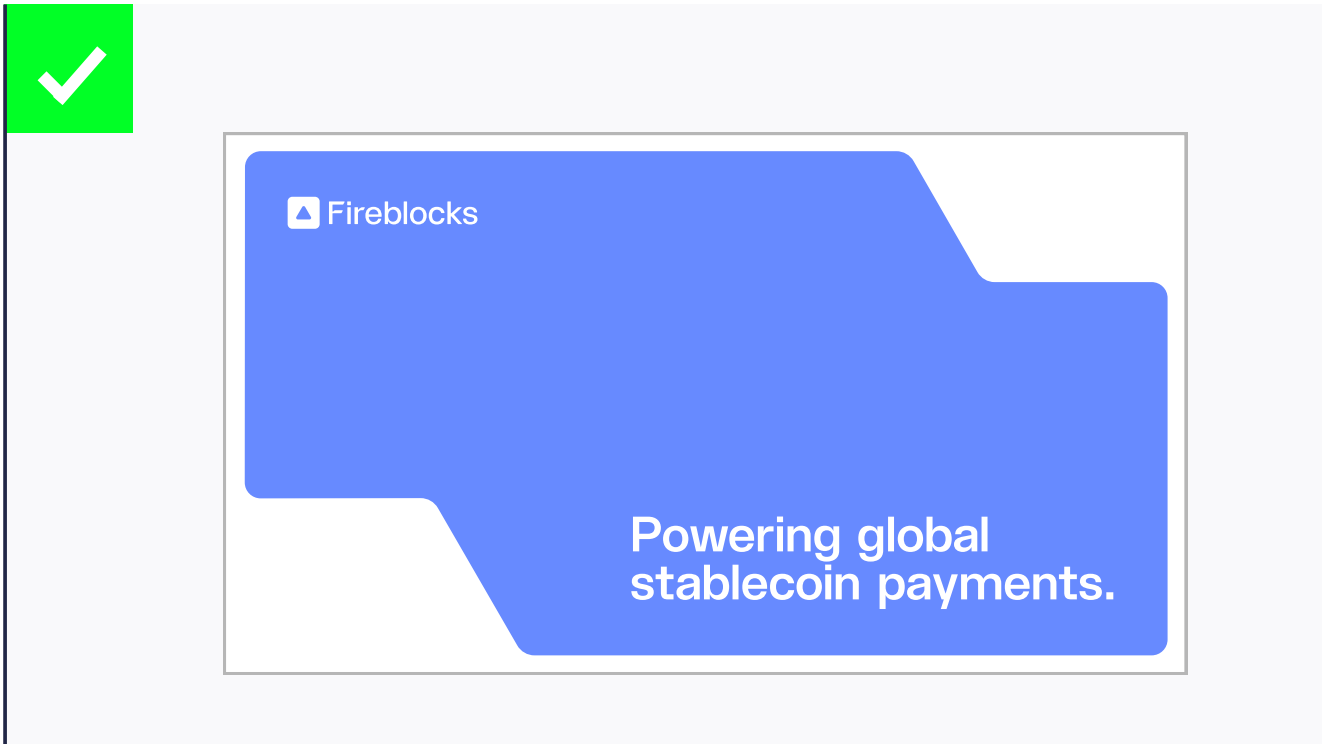

Visual System

Shape Usages - Yes

Extend shapes beyond the canvas edges to create dynamic tension, but always ensure composition and balance are preserved.

Use shapes as a frame for typography and photography.

Align typography rag with shapes in a way that compliments the overall composition.

Use shapes with clean geometry that complement the overall layout

Embrace whitespace that heroes our messaging, to preserve clean composition

Use shapes that don't form awkward negative space that breaks the visual rhythm.

Shape Usages - No

Create a sporadic combination of shapes across the canvas

Do not use shape mosaics or dense, earthy-pattern backgrounds that distract from core content and reduce clarity.

Do not use an unreasonable number of shapes per canvas to preserve visual hierarchy and prevent clutter.

Do not use zigzag or overly intricate shapes. Stick to clean, geometric forms that align with and complement the overall layout,

On small canvases, do not construct oversized triangles from more than three smaller triangles, as it disrupts proportion

Do not use shapes that interact awkwardly or accidental negative space that breaks the visual rhythm.

Photography

Application of Visual Language

Photography can be used inside of shapes as a portal or entryway into the world of Fireblocks.

✓ single image whoing the full bleed shape, with an image inside

Things to avoid

Adhere to the following rules when incorporating photos.

✗ Avoid curve forms that are not smooth

✗ Avoid using unbranded color schemes and gradients

✗ Avoid using textures on the waves

✗ Avoid shiny metallic material textures

✗ Avoid forms where that are not clear and distinct

✗ With line textures make sure they are seamless

Icons & Illustrations

Icons

Icon set built on 48x48 px grid, with the stroke weight of 2 pt and gap distance of 3 pt. The fills use 1 pt rounding and strokes 2pt rounding where applicable. Conceptually the icons use overlay approach where fill is created at the point of two objects meeting.

Data Visualization

Data Visualization Overview

Our approach to data visualization is simple, modern, and firmly rooted in our brand’s visual language. Each chart or graphic should feel clear, purposeful, and consistent, while drawing subtle inspiration from our core brand shapes.

Before creating a visualization, the intent behind the data must be defined, whether the goal is to tell a compelling story, highlight a single key number, or present a detailed analysis. This purpose determines which chart format should be used.

Chart Formats

We categorize our charts into two primary formats:

Narrative Data

Use this format when the objective is to make a point, emphasize a specific number, or frame the data as part of a story. *Example: “Stablecoin adoption grew by 62% this year.”* These charts should be visually expressive, integrating our grid, shapes, and bold typography. They may include accent colors from the primary palette to make the data feel alive and connected to our identity.

Analytical Data

Use this format for technical, precise, or finance-oriented data. The audience here expects clarity and rigor. This style favors widely recognized chart formats (e.g., line, bar, pie) for ease of comprehension, while still incorporating brand cues. Branded detailing should remain subtle: rounded edges inspired by our shapes, considered spacing, and chart styles that harmonize with our overall design system.

Chart Color Usage

Color application varies by chart format and intent.

Narrative Data
Primarily use our core brand palette, drawing from both the primary and extended UI palettes when needed. Multiple accent colors may be introduced in this format to enhance visual storytelling and impact, provided they remain balanced and supportive of the brand identity.

Analytical Data
Two approved directions exist:
Employ the primary grey palette as the base, with one accent color to highlight key data points. Or apply a single accent color and its tonal range when illustrating product-related datasets (e.g. Bandwidth Blue and shades for digital asset infrastructure).
